

USER GUIDE

Running your solar pipeline in Lampara.

A complete walkthrough of Lampara CRM — from a customer's first inquiry to a signed, installed, and supported solar system.

• GETTING STARTED

One tool, one customer, start to finish.

Lampara CRM follows a single project through every real stage of a Philippine solar installation — nothing generic, nothing borrowed from a different kind of business.

First Inquiry → Site Inspection → Quote → Signed Contract → Installation → Active Customer

Office & Sales Staff

Runs the pipeline from a desk

Creates projects, builds quotes, generates contracts, and keeps the whole pipeline moving.

- Dashboard, Pipeline, Projects
- Quotes, Contracts, Packages
- Team & role management

Field Technicians

Works on-site, mostly on a phone

Fills out the ocular inspection at the property, and manages their own installation jobs.

- Site inspection report
- Installation checklist & photos
- Install to your home screen (PWA)

Everyone

One shared source of truth

No customer login — the team manages everything on the customer's behalf, in one place.

- Real-time updates across the team
- Full activity history, per project
- An AI assistant that can answer questions

The Dashboard

The first thing you see after signing in — a morning-glance view of the whole business, not just a list.

- 1 **Stat strip** — total projects, active pipeline, contracts signed, installations, at a glance.
- 2 **Recent Projects** — your most recently active projects, with city shown right under each name.
- 3 **Upcoming** — the next week's inspections and installations, company-wide.
- 4 **Activity Feed** — a live stream of everything happening across every project.

Tip — click any row in any panel to jump straight to that project's relevant tab.

• THE PIPELINE

One board, every stage.

A Kanban view of the whole sales pipeline. Drag a card to move it, or use the dropdown for precision on a smaller screen.

- 1 **New Lead** → Inspection Scheduled → Inspection Done → Proposal Sent
- 2 **Contract Signed** → Install Scheduled → Install Complete → Active Customer

Good to know — stages mostly move themselves.

Completing an inspection, approving a quote, or signing a contract advances the card automatically — dragging is for the exceptions, not the everyday flow.

• PROJECTS

Find any project, fast.

A full, searchable table of every project the company has ever run — not just a peek.

- 1 **Search** by name, phone, or email.
- 2 **Filter** by stage, property type, or design type.
- 3 **Sort** newest first (default), oldest, recently active, or by name.

Tip — the Location, Property Type, and Design Type columns hide progressively on a narrower window, rather than squeezing illegibly.

⚙

- **STARTING OUT**

Adding a new project.

"New Project" from the Dashboard, Pipeline, or Projects page opens the same form — a customer and their property, in one step.

- 1 **Required** first & last name, phone, province, city/municipality, barangay.
- 2 **Optional** email, assigned rep, property type, street/subdivision, notes.
- 3 **Address fields cascade** — city choices narrow once a province is picked, same for barangay.

Why it matters — the real PH address hierarchy (barangay / city-municipality / province) is used everywhere downstream — on quotes, contracts, and the calendar.

The screenshot shows the 'New Project' form overlaid on the Lampara Solar CRM dashboard. The form is titled 'New Project' and includes a subtitle 'Add a new project and their property to the system.' The form fields are organized as follows:

- First Name:** Text input with 'Jane' entered.
- Last Name:** Text input with 'Smith' entered.
- Phone:** Text input with '0917 123 4567' entered.
- Email (optional):** Text input with 'jane@example.com' entered.
- Assign To:** Dropdown menu with 'Unassigned' selected.
- Property / Site:**
 - House/Unit/Block & Lot Number:** Text input with 'e.g. Blk 3 Lot 12, Unit 4B' entered.
 - Street Name:** Text input with 'e.g. Kabisang Imo St' entered.
 - Subdivision/Village:** Text input with 'Optional' entered.
- Province:** Dropdown menu with 'Select province' selected.
- City or Municipality:** Dropdown menu with 'Select province first' selected.
- Barangay:** Dropdown menu with 'Select city/municipality first' selected.
- ZIP Code:** Text input with 'Optional' entered.
- Property Type:** Dropdown menu with 'Residential' selected.
- Notes:** Text area with 'Any initial notes...' entered.

The background dashboard shows a sidebar with navigation links (Dashboard, Projects, Pipeline, Calendar, Packages, Team) and a main content area with a 'Good afternoon, Lloyd' greeting, a '7 Total Projects' summary, and a 'Recent Projects' list. A 'New Project' button is visible in the top right corner of the dashboard.

- INSIDE A PROJECT

Seven tabs. One customer, followed all the way through.

Every project opens to the same seven-tab layout, in the order the work actually happens: Overview, Ocular Inspection, Quotes, Contract, Installation, Maintenance, and Activity History.

Everything about the customer.

The project's home tab — contact details, property, and a running log the whole team can see.

- 1 **Details** phone, email, address, property/design type, assigned rep.
- 2 **Notes** a call, a promise, anything worth remembering — timestamped and attributed.
- 3 **Files** photos or documents, dropped in or uploaded, up to 10 MB each.

The site survey.

Filled out on-site by a field technician, mirroring the company's actual paper inspection form — roof, meter, and system sizing.

- 1 **Make ocular report** — roof type, electrical meter, panel/network conditions.
- 2 **System recommendation** a sized package suggestion based on what's actually on site.
- 3 **Print / Save** the completed report as a PDF.

Automatic — completing an inspection moves the project to **Inspection Done** on the Pipeline for you.

Quotes & proposals.

Build a quote from a saved Package, or line by line.
Every edit before approval is versioned, so nothing is ever silently overwritten.

- 1 **New Quote** pick a Package or add custom line items — quantity, unit price, total.
- 2 **Unlock / Edit** while still a draft; approving locks it for good.
- 3 **Revise to v2** instead of editing an approved quote, so history stays intact.

Automatic — approving a quote sets the project's **Design Type** from the package you picked, and advances the pipeline stage.

From quote to signed contract.

A contract is generated as a PDF for an approved quote — one per quote version, including the company's real payment details.

- 1 **Generate** from an approved quote — nothing to re-type.
- 2 **Print / Save** the branded contract PDF for the customer.
- 3 **Mark Signed** once the customer countersigns — this is what advances the pipeline.

Why it matters — a revised quote gets its own contract without disturbing an earlier signed version's paper trail.

Scheduling the crew.

Installations run over a date range, not a single day — with a materials checklist and completion photos to close it out.

- 1 **Schedule** a start/end date and the crew, once the contract is signed.
- 2 **Materials Checklist** panels mounted, inverter & battery installed, system commissioned.
- 3 **Completion Photos** attach proof of work before marking it done.

Automatic — completing an installation moves the project to **Active Customer**.

Service & warranty, after the sale.

The relationship doesn't end at installation — log service tickets for anything the customer reports afterward.

- 1 **New Ticket** describe the issue, tag it Warranty if it's covered.
- 2 **Status** Open → In Progress → Resolved / Closed.
- 3 **Priority** Low, Medium, or High, so nothing urgent gets buried.

• PROJECT · ACTIVITY HISTORY

Everything that happened, in order.

Every stage change, quote revision, contract event, and note — one project's own complete timeline.

- 1 **Who and when** every entry is attributed and timestamped.
- 2 **No manual logging** it fills itself in as the team works the project.

Related — the [Dashboard's Activity Feed](#) is this same idea, but across every project at once.

- BEYOND A SINGLE PROJECT

The tools that run across every project.

Calendar, Packages, Team, your Profile, and the AI Assistant — the company-wide side of Lampara, not scoped to any one customer.

- CALENDAR

Every inspection and install, in one schedule.

A company-wide calendar, not per-project — Week or Month view, color-coded by kind.

- 1 **Inspection** blue — has a specific time of day.
- 2 **Installation** teal — shown across its full date range.

Tip — click any event to jump straight to that project's relevant tab.

The building blocks of every quote.

Pre-priced solar system bundles by capacity tier — what a quote gets built from, instead of pricing each system from scratch.

- 1 **System size** 3, 6, 8, 12, or 16 kWp — with matching panels, inverter, and battery.
- 2 **Design type** e.g. Hybrid — carried through to the project once its quote is approved.
- 3 **Archive, don't delete** keeps old quotes that reference a retired package intact.

Lloyd De Guzman Superadmin

• TEAM

Who's on the team, and what they can touch.

Approve new sign-ups and manage everyone's role from one place.

- 1 **Superadmin** full access, including Packages and role management.
- 2 **Admin** everything except Packages.
- 3 **Technician** field work — inspections and their own installation jobs.

Tip — deactivate someone who's left rather than deleting them, so their work stays attributed.

- **YOUR PROFILE**

Your account, your way.

Update your details and decide what Lampara should email you about.

- 1 **Account** display name and email.
- 2 **Password** change it any time.
- 3 **Notifications** choose what's worth an email — a lead assigned to you, an inspection scheduled, and more.

The screenshot displays the 'My Profile' page in the Lampara CRM interface. On the left is a sidebar with navigation links: Dashboard, Projects, Pipeline, Calendar, Packages, and Team. The main content area is titled 'My Profile' and includes a subtitle 'Your account details and personal preferences'. It features three sections: 1. 'Account' section with a profile card for 'Lloyd De Guzman' (Superadmin, Member since September 8, 2026) and input fields for 'Display Name' (Lloyd De Guzman) and 'Email' (deguzman.johnlloyd12@gmail.com), with a 'Save Changes' button. 2. 'Change Password' section with input fields for 'New Password' and 'Confirm Password' (both masked with dots), and an 'Update Password' button. 3. 'Email Notifications' section with two toggle switches: 'Lead assigned to me' (disabled) and 'Inspection scheduled' (enabled). The bottom of the sidebar shows the user's name 'Lloyd De Guzman' and role 'Superadmin'.

Ask, don't dig.

A built-in assistant that already knows your projects, schedule, and pipeline — open it from the floating button, or  / / **Ctrl** / .

- 1 **Ask a question** "which projects have gone stale?" — plain language, real answers.
- 2 **Proactive insights** it surfaces things worth knowing before you ask.

Safety — any action that would change data always asks you to confirm first — the AI can't quietly edit or delete anything on its own.

• ON THE GO

Built for the field, not just the office.

Field technicians work primarily on a phone — Lampara installs like a real app and stays usable with a spotty connection.

- 1 **Add to Home Screen** install the PWA for a full-screen, app-like experience.
- 2 **Bottom tab bar** replaces the sidebar automatically on a narrow screen.
- 3 **Touch-friendly Pipeline** drag a card by touch, the same as with a mouse.

Technician Field work only

Need help? — ask the Lampara AI Assistant first — most "how do I..." questions are faster answered there than by searching this guide.

What we call things

TERM	MEANS
Project	A customer's job, start to finish — called a "lead" internally, "project" everywhere you see it.
Pipeline Stage	Where a project sits right now — New Lead through Active Customer, plus Cancelled.
Ocular Inspection	The on-site survey — same form as the company's paper version.
Package	A pre-priced solar system bundle by capacity tier — what a quote is built from.
Design Type	Set automatically once a quote's package is approved (e.g. Hybrid).
Quote Version	v1, v2... each revision after approval is a new version, not an overwrite.
Active Customer	The final pipeline stage — installation complete, contract fulfilled.
Service Ticket	A post-install issue or warranty claim, logged on the Maintenance tab.
Barangay	The smallest unit of the PH address hierarchy captured on every property.

That's Lampara.

One project, followed all the way through — from a phone call to a powered-on system.
